Meet Penguins

The `penguins` data from the [palmerpenguins](#) (“Palmerpenguins R Data Package” n.d.) package contains size measurements for 344 penguins from three species observed on three islands in the Palmer Archipelago, Antarctica. According to “Penguin” (2025), Penguins are a group of aquatic flightless birds.

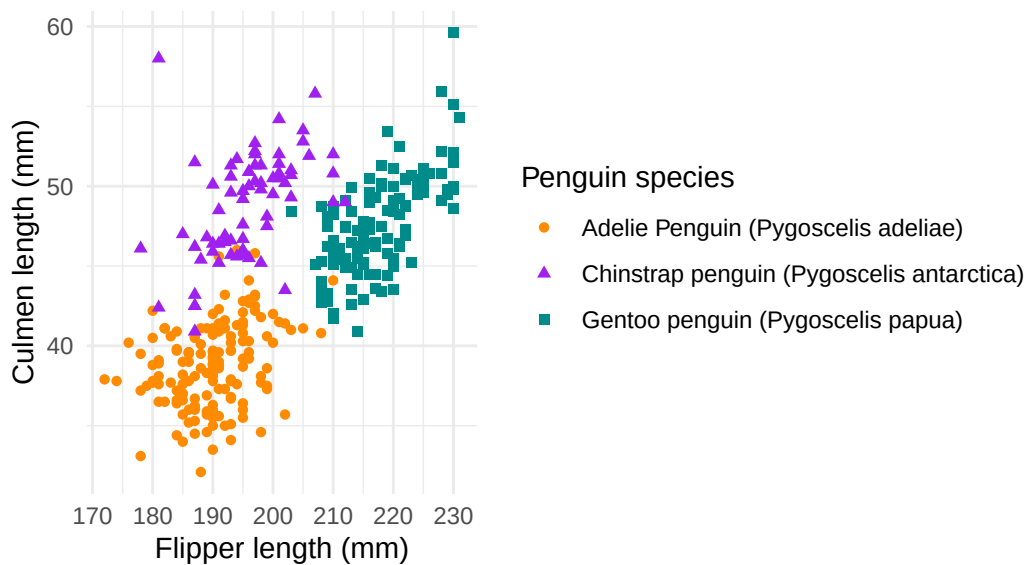

The plot below shows the relationship between flipper and bill lengths of these penguins. There are 124 penguins of the Gentoo species, 68 of the Chinstrap species, and 152 of the Adelie species in the dataset. Together, Gentoo and Adelie make up most of the data set, namely 276.
